Total Score	21
Asperger's Validation Percentile	28.7

Interpretive Text

Based on the Asperger's Validation Sample, this individual may have Asperger's Disorder. A cut off of 13 yields a true positive rate of at least 90% and a false positive rate of at most 22%.

Scoring and Interpretation Information

Results consist of a total score and a percentile based on Ebler, Gillberg and Wing (1999) sample of Asperger's children. High scores indicate that many characteristics of Asperger's were reported. A percentile of 50 would indicate that this individual had, on average, the same score as the validation sample who were independently diagnosed with Asperger's. This test is not diagnostic. A cutoff score of 13 was shown to have a true positive rate of 90% and a false positive rate of 22% (Ehlers, Gillberg, Wing, 1999). See developer reference for further details.
