

Client Information

<i>Client Name</i>	Generic Client
<i>Date of birth (age)</i>	1 January 1800 (221)

Assessment Information

<i>Assessment</i>	Clinical Outcomes in Routine Evaluation (CORE-OM)
<i>Date administered</i>	15 April 2021
<i>Assessor</i>	Dr Ben Buchanan'
<i>Time taken</i>	1 minutes 2 seconds

Results

	Raw Score	Mean Score	Clinical Percentile
Total	28	0.82	8.3
Well-being	2	0.50	2.6
Problems/symptoms	3	0.25	0.9
Life functioning	22	1.83	48.6
Risk/harm	1	0.17	27

Scoring and Interpretation Information

Scores are presented as a total raw score (range 0-136) and a client average response from 0 - 4, which represents that average response on the likert scale and allows for standardised comparison across subscales. Higher scores represent poorer overall functioning.

In addition, scores are presented as a percentile compared to a clinical normative sample, where a percentile of 50 represents the average psychological distress of someone seeking psychological intervention.

Scores are presented for the 4 subscales.

- Subjective well-being deficits (items 4, 14, 17, 31)
- Problems/symptoms (items 2, 5, 8, 11, 13, 15, 18, 20, 23, 27, 28, 30)
- Life functioning difficulties (1, 3, 7, 12, 10, 19, 21, 25, 26, 29, 32, 33)
- Risk/harm (9, 6, 16, 22, 24, 34)

When administered more than once two graphs are produced. The first shows the total clinical percentile over time, which compares respondents total score to other people seeking mental health support. The second graph represents subscale percentiles over time and is helpful for understanding the areas of improvement or deterioration and therefore targets for treatment. Both graphs can be useful in providing feedback to clients and assessing treatment response.

Interpretive Text

Overall the results indicate this person has low level psychological distress that may be of clinical significance. (As indicated by raw scores between 21 and 33)
The score on the Risk/Harm sub scale indicate below average report risk of harm to self or others. Nevertheless, responses to this questionnaire should not be relied upon as the primary risk assessment method.
