Interpretive Text

Problem gamblers gamble with negative consequences and a possible loss of control. For example, they may often spend over their limit, gamble to win back money and feel stressed about their gambling.

Scoring and Interpretation Information

A total score is presented (0 - 27) where a higher score is indicative of more severe problematic gambling behaviours.

For ease of reference, a severity index is provided for the total score based upon prior research. Scores of 0 are considered to be a severity of "none", scores of 1-4 are considered "low", scores of 5-7 are considered "moderate" and scores of 8 and above are considered to be "problematic" severity (Currie et al., 2010; Currie et al., 2013).

A plot is displayed if the PGSI is administered more than once. The plot shows the total score over time with dotted lines indicating the cutoff points for the severity indexes. Although the total score is out of 27, scores greater than 10 are very infrequent (Currie et al., 2013) and so the y-axis may be truncated if scores are greater than or equal to 10 for ease of reading the plot.
